Art Unit: 1771

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2, 10-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Fourezon et al, U.S. Patent No. 5,667,882. Fourezon discloses a first layer of carded fibers such as polypropylene fibers which have a layer of continuous glass fibers disposed thereon, wherein the two layers are then needled to form a mixed fiber mat. See abstract; col. 1, lines 50-col. 2, line 4; col. 2, lines 48-51; col. 2, lines 667; col. 3, lines 1-6.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fourezon et al, U.S. Patent No. 5,667,882 in view of Ihm et al, U.S. Patent No. 5,441,590. Fourezon discloses a mixed fiber mat and a method of making the mat as set forth above. Fourezon teaches that the mat may be combined with other layers including other fiber and fabric layers and is useful for forming composite materials, however, Fourezon does not specifically teach employing the particularly claimed additional glass and polymeric fiber layers. Ihm et al teaches additional layers including

fiberglass and polymeric fiber layers may be added to needled multilayer laminates which comprise fiberglass and polymer fibers in order to enhance the strength, thermal resistance and fluidity of the laminates. The laminates can be used in molding processes. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have added additional layers to the material of Fourezon as taught by Ihm et al, motivated by the expectation that this would enhance the overall strength of the laminate.
